The screenshot displays the MIT App Inventor web interface in a browser. The address bar shows the URL `ai2.appinventor.mit.edu/#5507848797552640`. The interface includes a top navigation bar with links like "Service Detail", "IBM Watson", "Node-RED", and "MIT App Inventor". Below this is a "GAS" (Google App Script) section with buttons for "Screens", "Add Screen", "Remove Screen", and "Publish to gallery".

The main workspace is divided into two panels: "Blocks" on the left and "Viewer" on the right. The "Blocks" panel shows a library of built-in blocks categorized into Control, Logic, Math, Text, Lists, Dictionaries, Colors, Variables, and Procedures. The "Viewer" panel shows the visual representation of the code blocks. The code is structured as follows:

- A **when Clock1.Timer** block triggers a **do** block containing:
 - set Web1.Uri** to `https://node-red-ryue-2022-11-04-us-east-myblue...`
 - call Web1.Get**
- A **when Web1.GetText** block triggers a **do** block containing:
 - set Label3.Text** to **look up in pairs** key `TemperatureZ1`. This is followed by a **call Web1.JsonTextDecode** block with **jsonText** set to **get responseContent**.
 - set Label5.Text** to **look up in pairs** key `HumidityZ1`. This is followed by a **call Web1.JsonTextDecode** block with **jsonText** set to **get responseContent**.
 - set Label7.Text** to **look up in pairs** key `GasLevelZ1`. This is followed by a **call Web1.JsonTextDecode** block with **jsonText** set to **get responseContent**.
 - set Label23.Text** to **look up in pairs** key `PressureZ1`. This is followed by a **call Web1.JsonTextDecode** block with **jsonText** set to **get responseContent**.
 - set Label14.Text** to **look up in pairs** key `TemperatureZ2`.

The "Viewer" panel also includes a "Show Warnings" button and a "Designer" button. The bottom of the screen shows a Windows taskbar with various application icons and a system tray indicating "Raining now" and the time "8:54 PM".
